

# ***Customer Segmentation Insights***

## ***USING K-MEANS CLUSTERING***

ABDALLAH SANA - 08/26/2025

---

# Business Objective

---

- ☐ Understand different types of customers
- ☐ Optimizing marketing strategy
- ☐ Improving retention and revenue

# Approach

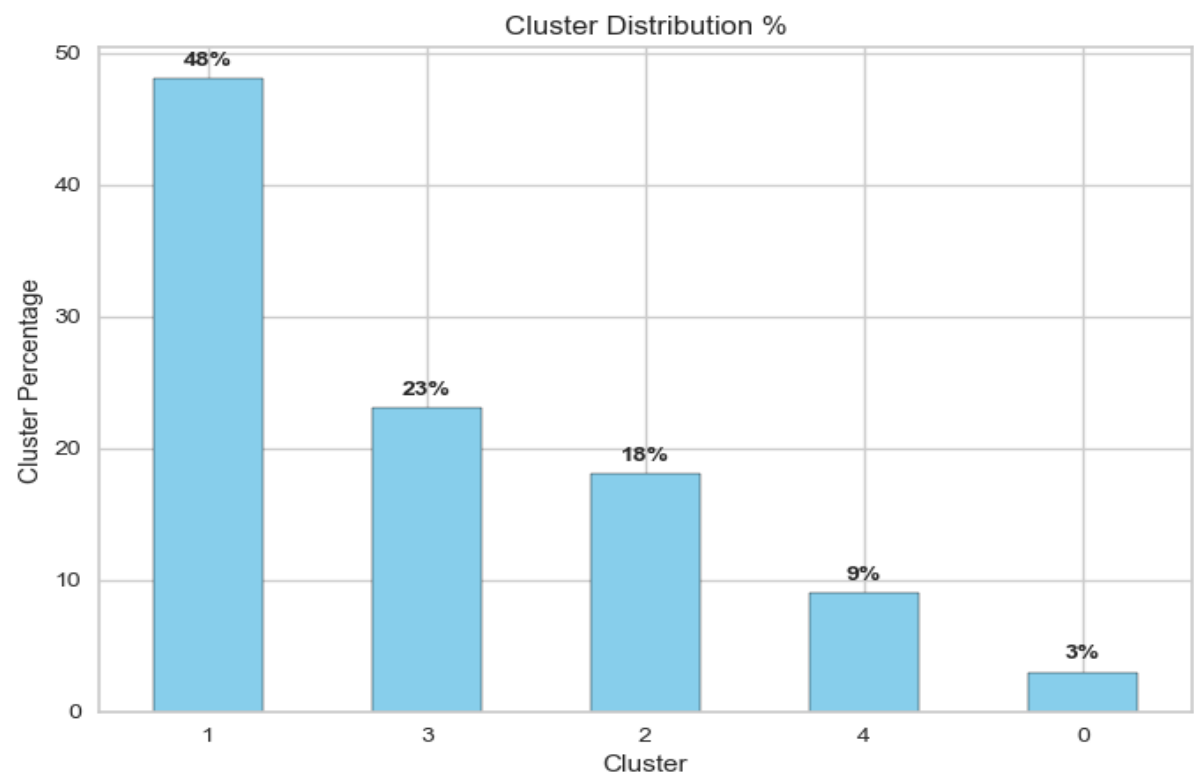

---

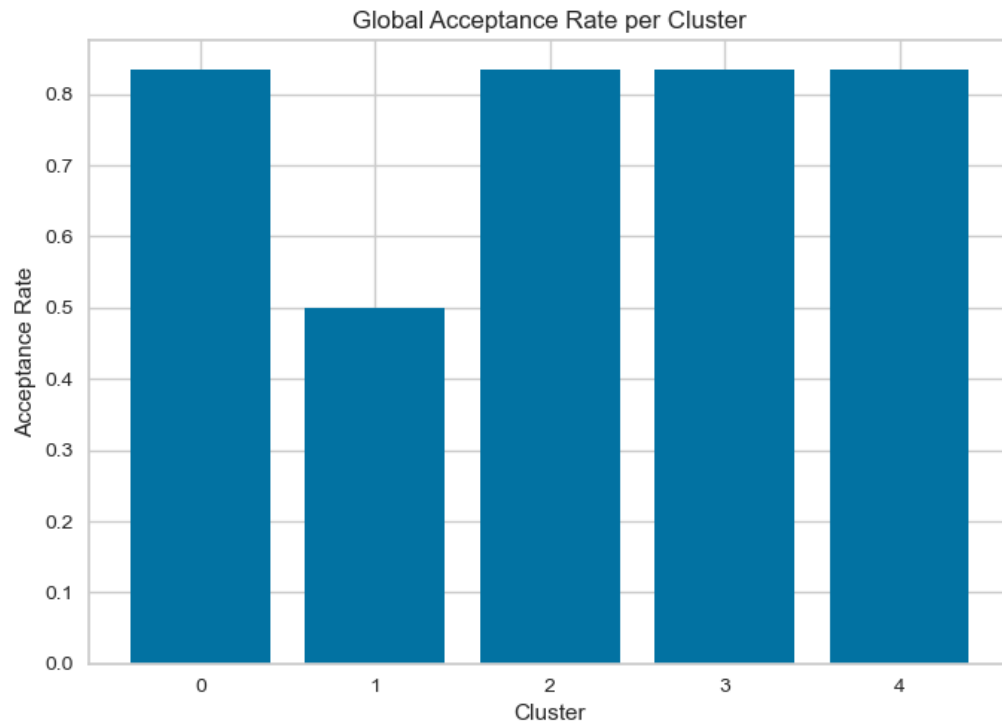

- Data used (demographics, spending behavior, engagement)
- KMeans algorithm used to group customers into **X segments**

# Results

Cluster 0	Cluster1	Cluster2	Cluster3	Cluster4
Mostly young non-parents with moderate spending (~35% of income).	Exclusively adult parents with very low spending (~9% of income).	Adult non-parents with high spending (~56% of income).	Adult parents with moderate-to-high spending (~43% of income).	Adult non-parents with low spending (~19% of income).

- Cluster 0 has the **widest spread**, including some very low and very high incomes.
- Cluster 1 is centered around **lower incomes (~30K–50K)**.
- Clusters 2 and 3 concentrate around **higher mid-level incomes (~60K–80K)**.
- Cluster 4 is diverse, spanning from low to high incomes, but with a concentration near **70K**.

👉 **Key takeaway:** Cluster 1 represents a **low-income, low-acceptance group**, while the other clusters generally show **higher incomes and higher acceptance rates**.

# Recommendations

## Cluster 0

👉 Offer lower-cost but stylish, attractive products (like entry-level or lifestyle-focused items) to appeal to diverse income levels. Highlight **wines and meat**, which align with their spending habits, using trendy bundles or promotions. Use digital channels (social media, influencers) to connect with the younger segment.

## Cluster 1

👉 Provide value-oriented promotions, discounts, and **family bundles featuring meat and wine**, as this group is highly budget-conscious yet spends more in these categories. De-emphasize premium items like gold, fish, or fruits.

## Cluster 2

👉 Target with **premium wine and meat packages**, subscriptions, and loyalty programs. Emphasize exclusivity, quality, and convenience, while avoiding less popular categories (gold, fish, fruits). Personalized recommendations will resonate strongly here.

## Cluster 3

👉 Promote **mid-to-premium family-oriented products** such as meat packs and wine bundles for home dining. Campaigns around family wellness or celebrations will fit well, while minimizing focus on gold, fish, and fruits.

## Cluster 4

👉 Encourage engagement through affordable luxury, add-on services, or loyalty points. Position **wine and meat as accessible lifestyle luxuries** at reasonable costs. Downplay categories with low spending (gold, fish, fruits) to keep offers relevant.
